

Yellowknife SANI SPORT

GETTING THE STINK OUT OF YOUR GAME!

Hockey equipment treatment preparation instructions:

1. Ensure gear is thoroughly dried for best possible results.
2. Remove all items from bag except skates, shin pads or goalie pads, pants, shoulder pads or chest protector, elbow pads, neck protector, gloves, and helmet. (This would be a good time to wash your equipment that can go into the regular laundry).
3. Undo laces from skates to the 2nd last eyelet. Leave guards on.
4. Take apart any equipment that is velcroed together, i.e.: shin pad inner linings, skate liners. Helmet visors can be left on.
5. Vacuum or dump out any dirt from hockey bags.
6. If this is a first treatment or if your putting the gear away for the season, the bag should also be done.
7. Place all gear ready for treatment in hockey bag and bring it over.
8. Once treatment is complete, gear is ready for use.
9. We use a bactericide, which helps prolong the treatments. Please let us know if you have any skin conditions, which may cause sensitive skin.

Thank you for choosing to have your sports equipment professionally sanitized by the "SANI SPORT" process. Have a good clean game.
